Any good text book, particularly that in the fast changing fields such as engineering & technology, is not only expected to cater to the current curricular requirements of various institutions but also should provide a glimpse towards the latest developments in the concerned subject and the relevant disciplines. It should guide the periodic review and updating of the curriculum.

This valuable new book, *Handbook of Research on Medicinal Chemistry: Innovations and Methodologies*, presents some of the latest advancements in the various fields of combinatorial chemistry, drug discovery, biochemical aspects, pharmacology of medicinal agents, current practical problems, and nutraceuticals. The editors keep the drug molecule as the central component of the volume and aim to explain the associated features essential to exhibiting pharmacological activity. With a unique combination of chapters in biology, clinical aspects, biochemistry, synthetic chemistry, medicine and technology, the volume provides broad exposure to the essential aspect of pharmaceuticals. The volume covers many important aspects of medicinal chemistry, including techniques in drug discovery, pharmacological aspects of natural products, chemical mediators, druggable targets, advances in medicinal chemistry. The field of medicinal chemistry is growing at an unprecedented pace, and this volume takes an interdisciplinary approach, covering a range of new research and new practices in the field. The volume takes into account the latest therapeutic guidelines put forward by the World Health Organization and the U.S Food and Drug Administration. Topics include: drug design, drug discovery, natural products and supplements and nutraceuticals, pharmaceutical approaches to sexual dysfunction, drug resistance, parasites, new natural compounds and identification of new targets, stereochemistry, aspects in medicinal chemistry, common drug interactions in daily practices. *Handbook of Research on Medicinal Chemistry: Innovations and Methodologies* will be a valuable addition to the bookshelves of pharmaceutical scientists and faculty as well as for industry professionals.

This textbook for the first year students of all branches of Rajiv Gandhi Pradyogiki Vishwavidyalaya (RGPV), Bhopal (M.P.), It has been strictly according to the new syllabus of RGPV. The subject matter has been explained clearly and precisely in the simplest way. Salient features are: 250 Solved Examples, a number of exercises at the end of every chapter, Multi-Choice.

Renewable Energy Engineering and Technology: Principles and Practice - covers major renewable energy resources and technologies for various applications. The book is conceived as a standard reference book for students, experts, and policy-makers. It has been designed to meet the needs of these diverse groups. While covering the basics of scientific and engineering principles of thermal engineering, heat and mass transfer, fluid dynamics, and renewable energy resource assessments, the book further deals with the basics of applied technologies and design practices for following renewable energy resources: - Solar (thermal and photovoltaic) - Wind - Bio-energy including liquid biofuels and municipal solid waste - Other renewables such as tidal, wave, and geothermal. The book is designed to fulfil the much-awaited need for a handy, scientific, and easy-to-understand comprehensive handbook for design professionals and students of renewable energy engineering courses. Besides the sheer breadth of the topics covered, what makes this well-researched book different from earlier attempts is the fact that this is based on extensive practical experiences of the editor and the authors. Thus, a lot of emphasis has been placed on system sizing and integration. Ample solved examples using data for India make this book a relevant and an authentic reference.
