An estimated 25% of death and disease globally, and nearly 35% in regions such as sub-Saharan Africa, is linked to environmental hazards. Some key areas of risk include the following: Unsafe water, poor sanitation and hygiene kill an estimated 1.7 million people annually, particularly as a result of diarrhoeal disease.

**WHO—Priority environment and health risks**

Risk and hazard are terms commonly used to describe aspects of the potential for harm from environmental and other agents. The meaning of these terms in epidemiological usage is somewhat different from their meaning in common parlance, and indeed different from their usage in disciplines concerned with risk management.
