What are the challenges that small countries face concerning innovation and what are the effects of globalization on their innovation systems? In this very interesting, rich and timely book, Edquist and Hommen compare ten different small national innovation systems from the Asia Pacific and Northern Europe that are rather advanced in their development. The answers that the authors give are convincing and relate not only to the unique characteristics of each national system that shapes innovative activity, but also to some commonalities that exist across these countries. Franco Malerba, Bocconi University, Italy This major book presents case studies of ten small country national systems of innovation (NSIs) in Europe and Asia, namely, Denmark, Finland, Hong Kong, Ireland, the Netherlands, Norway, Singapore, South Korea, Sweden and Taiwan. These cases have been carefully selected as examples of success within the context of globalization and as new economies where competition is increasingly based on innovation. To facilitate comparative analysis the ten studies follow a common structure, informed by an activities-based approach to describing and analysing NSIs, which addresses the critical issues of globalization and the consequences of innovation for economic performance. The final chapter compares fast growth and slow growth countries, concentrating on issues of innovation policy. The results illustrate the usefulness of an activities-based approach to studying NSIs, point to distinctive national roles within an increasingly differentiated international division of labour and address the key themes of selectivity and coordination in innovation policy. This valuable book presents one of the most significant, comprehensive and comparative country studies of NSIs in the last decade. It will have great import and should be widely read by every serious student and scholar of innovation studies.

Crisis with US sub-prime mortgages, paralysis in global credit markets and the run on Northern Rock all wake-up calls to the growing influence of finance and financial markets on the lives of ordinary people. Social scientists began debating financialization in the late 2000s much as they debated globalisation in the 1990s, and this important book prepares the way by allowing readers to (re)define financialization for themselves. The articles are grouped by discourse, covering not only inter-war liberal collectivism and current cultural economy, but also the agency theory of mainstream finance and political economy of various kinds. Helpful commentaries introduce each individual reading while section introductions analyze the assumptions, core propositions, achievements and limits in each distinct literature. This book will challenge readers to bring a new understanding to the financialization of present day capitalism. It is an invaluable resource for students and researchers from business and management, plus all the social sciences with interests in political and cultural economy.

The contributors to this volume undertake to establish the foundations and definitions of intergenerational justice and to explore its capacity to guide us in policy and public opinion judgments we must make to face unprecedented issues. . . We are changing the biosphere and using resources to an extent never contemplated in the history of ethics. Deterioration of our oceans, loss of topsoil, insecurity about potable water supplies, the ozone hole, global warming, and the question about how to handle high-level nuclear waste which remains lethal perhaps 400,000 years from now, are some examples whose consequences reach far beyond inherited principles and policies of responsibility to others. This Handbook works to open a path for debate, extension of our tradition and invention of new thinking on these issues. Craig Walton, University of Nevada, Las Vegas, US More than a Handbook, this collection is a landmark work showing the way to a new ethics of intergenerational responsibility. It raises, in the most comprehensive way, the overarching ethical questions of our time, What are the rights of future generations? and How might present generations establish a philosophical foundation for its responsibilities to generations to come? . Peter Blaze Corcoran, Center for Environmental and Sustainability Education, Florida Gulf Coast University, US This important book provides a rich menu of history, current theory, and future directions in constitutional law, philosophy of rights and justice, and the relations of economics and politics to time, institutions, and the common good. It is enlivened by back-and-forth discussions among the authors (including some disagreements), as well as by applications to important contemporary issues such as climate change, nuclear waste, and public debt. Theoretic considerations are nicely balanced with examples of the means adopted in a number of countries to establish a legal foundation for protection of the quality of life for future generations. Neva Goodwin, Tufts University, US Do we owe the future anything? If so, what and why? Our capacity to affect the lives of future generations is greater than ever before, but what principles should regulate our relationship with people who don't yet exist? This Handbook offers a comprehensive survey of the key debates and pathbreaking accounts of potential ways forward both ethical and institutional. Andrew Dobson, The Open University, UK This Handbook provides a detailed overview of various issues related to intergenerational justice. Comprising articles written by a distinguished group of scholars from the international scientific community, the Handbook is divided into two main thematic sections foundations and definitions of intergenerational justice and institutionalization of intergenerational justice. The first part clarifies basic terms and traces back the origins of the idea of intergenerational justice. It also focuses on the problem of intergenerational buck-passing in the ecological context; for example in relation to nuclear waste and the greenhouse effect. At the same time, it also sheds light on the relationship between intergenerational justice and economics, addressing issues such as public debt and financial sustainability. The innovative second part of the volume highlights how posterity can be institutionally protected, such as by inserting relevant clauses into national constitutions. Reading this volume is the best way to gain an overall knowledge of intergenerational justice an extremely salient and topical issue of our time. The Handbook is an important contribution to the literature and will be of great interest to academics and graduate students as well as readers interested in wider human rights issues.

Orchids account for a large share of global floriculture trade both as cut flowers and as potted plants, and are estimated to comprise around 10% of international fresh cut flower trade. The average value of fresh cut orchids and buds trade during 2007-2012 was US\$ 483 million. In 2012, there are more than 40 countries exporting orchids and 60 countries importing orchids around the world, with the total size of the global trade equaling US\$ 504 million. In India, about 1350 species belonging to 186 genera represent approximately 5.98% of the world orchid flora and 6.83% of the flowering plants in India. The publication on "Commercial Orchids" is presented in 15 interesting chapters vividly highlighting the global orchid industry, bio-diversity, conservation and bio-piracy of genetic resources, morphological and molecular characterization of valuable species, breeding approaches for improved genotypes, production of quality planting materials, physiology of tropical and temperate orchids, climate change and its impact on orchid productivity, production technology of commercial epiphytic orchids for cut flower, production technology of commercial terrestrial orchids for cut flower, orchids for pot culture, hanging baskets and tree mounting, medicinal and aromatic orchids, post-harvest management of cut flowers of commercial orchids, value addition and marketing.

What are the best practices for leading a workforce in which human employees have merged cognitively and physically with electronic information systems and work alongside social robots, artificial life-forms, and self-aware networks that are "colleagues" rather than simply "tools"? How does one manage organizational structures and activities that span actual and virtual worlds? How are the forces of technological posthumanization transforming the theory and practice of management? This volume explores the reality that an organization's workers, managers, customers, and other stakeholders increasingly comprise a complex network of human agents, artificial agents, and hybrid human-synthetic entities. The first part of the book develops the theoretical foundations of an emerging "organizational posthumanism" and presents frameworks for understanding and managing the evolving workplace relationship between human and synthetic beings. Other chapters investigate topics such as the likelihood that social robots might utilize charismatic authority to lead human workers; potential roles of AIs as managers of cross-cultural virtual teams; the ethics and legality of entrusting organizational decision-making to spatially diffuse robots that have no discernible physical form; quantitative approaches to comparing managerial capabilities of human and artificial agents; the creation of artificial life-forms that function as autonomous enterprises competing against human businesses; neural implants as gateways that allow human users to participate in new forms of organizational life; and the implications of advanced neuroprosthetics for information security and business model design. As the first comprehensive application of posthumanist methodologies to management, this volume will interest management scholars and management practitioners who must understand and guide the forces of technologization that are rapidly reshaping organizations' form, dynamics, and societal roles.
