The Science of Photography. The science part of photography includes all the technical equipment and the techniques required to produce an image. Unlike painting a landscape in oil, taking an image can be highly technical and there is one huge interference, and that is that the camera is between the subject matter and the photographer. An artist does not have this alien device separating the two elements, all he has is the canvas, his subject and a brush. The Art of Photography

Without further research, I tentatively concluded that photography is Art. But being the tenacious fact-finding journalist I allege to be, I went to all the trouble of Googling Science, too.

Is Photography Art or Science? | Shutterbug

One of the strongest arguments for the artistic nature of electronic photography is the fact that the picture is rarely really what is seen with the naked eye. Through the camera and computer, a person can alter the image in order to present what he or she wants to show. Some people argue that science is the true nature of this art. One argument is that photography, unlike painting, actually comes from something existing and not from a painters mind or emotion.

Is The Nature Of Photography An Art Or Science?

When it comes right down to it, photography is a personal pursuit. Whatever reason you enjoy your own or others images, whether it's the technical skill involved or the emotion embedded within the photo, I think we can all agree that Photography is an Art and Photography is a Science.

Photography: Art or Science? - Project RAWcast

Photography is categorized as a creative profession for it expresses the photographer's own understanding of the subject. But even then a lot of people justify photography not being art, based on the fact that a picture still comes from something while art could be completely imaginary and abstract.

Science Behind Photography | Art Of Photography ...

One type of visual art that is natural to integrate with science is photography. Photography is both an art and a science. The camera, which creates art, also captures and teaches us scientific understandings. Some of them are not visible by the human eye for various reasons. They may happen too quickly, are too small or are too far away. And sometimes, photos that depict science are provocative or beautiful or intriguing.
